

Assignment One

Java-1

- Create a new Java project called `Assignment1`, a new Java class called `Assignment1`, and a main method.
- Create variable called `firstName` and store your first name value in it
- Create variable called `secondName` and store your second name value in it
- Create variable called `middleName` and store your middle name value in it
- Create variable called `age` and store your age value in it
- Create variable called `gender` and store your gender value in it
- Create variable called `isworking` and store your is working value in it

Use the concatenation technique in your print statements your result should look like these:

```
Fist Name: Admeh
Last Name: Dicko
Middle Name:
Age: 7
Gender: m
Is working: false
Age: 17
Is working: true

Their are 5 characters found in Admeh
```

Happy Coding!
